x210 Series

ENTERPRISE EDGE SWITCHES

Allied Telesis x210 Series Layer 2+ switches offer an impressive set of features in an affordable package, ideal for applications at the network edge.

AlliedWare Plus™
OPERATING SYSTEM

The Allied Telesis x210 Series is a reliable and value-packed solution for today's networks. With a choice of 9-, 16- and 24-port versions, each with one or more SFP uplinks, the x210 Series switches are ideal for applications at the edge of the network where security and manageability are the key requirements.

Secure
Network security is guaranteed, with powerful control over network traffic types, secure management options, and other multi-layered security features built right into the x210 Series switches.

Allied Telesis x210 switches use 802.1x port-based authentication, in partnership with standards-compliant dynamic VLAN assignment, to assess a user's adherence to network security policies and either grant access or offer remediation. Tri-authentication ensures the network is only accessed by known users and devices. Secure access is also available for guests.

Security from malicious network attacks is provided by a comprehensive range of features such as DHCP snooping, STP root guard, BPDU protection and access control lists. Each of these can be configured to perform a variety of actions upon detection of a suspected attack.

Network Protection
Advanced storm protection features include bandwidth limiting, policy-based storm protection and packet storm protection.

Network storms are often caused by cabling errors that result in a network loop. Allied Telesis x210 Series switches provide features to detect loops as soon as they are created. Loop detection and thrash limiting take immediate action to prevent network storms.

Manageable
The x210 runs the advanced AlliedWare Plus™ fully featured operating system, delivering a rich feature set and an industry-standard CLI. Which, combined with a powerful web-based GUI, reduces training requirements and is consistent across all AlliedWare Plus devices, simplifying network management.

Powerful Network Management
Meeting the increased management requirements of modern converged networks, Allied Telesis Management Framework (AMF) automates many everyday tasks including configuration management. The complete network can be managed as a single virtual device with powerful centralized management features.

Investment Protection
With the depletion of IPv4 address space, IPv6 is rapidly becoming a mandatory requirement for many government and enterprise customers. To meet this need, now and into the future, the x210 Series supports IPv6 forwarding in hardware and features MLD snooping for efficient use of network bandwidth.

Silent Fan-less Operation
The x210 Series features compact models that are highly reliable and run silently, making them the ideal choice for placement on a desktop or in a dusty environment, without affecting their expected lifetime.

Features
» Comprehensive security features
» Easy management with AMF
» Silent operation
» Future-proof
» EPSR™ compatible

EPSRing™   **AMF**™

Key Features

Allied Telesis Management Framework (AMF)

» Allied Telesis Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.

Easy to Manage

» The AlliedWare Plus operating system incorporates an industry standard CLI, facilitating intuitive manageability.

» With three distinct modes, the CLI is very secure, and the use of SSHv2 encrypted and strongly authenticated remote login sessions ensures CLI access is not compromised.

Storm Protection

Advanced packet storm control features protect the network from broadcast storms:

» Bandwidth limiting minimizes the effects of the storm by reducing the amount of flooding traffic.

» Policy-based storm protection is more powerful than bandwidth limiting. It restricts storm damage to within the storming VLAN, and it provides the flexibility to define the traffic rate that creates a broadcast storm. The action the device should take when it detects a storm can be configured, such as disabling the port from the VLAN or shutting the port down.

» Packet storm protection allows limits to be set on the broadcast reception rate, multicast frames and destination lookup failures. In addition, separate limits can be set to specify when the device will discard each of the different packet types.

Loop Protection

» Thrash limiting, also known as Rapid MAC movement, detects and resolves network loops. It is highly user-configurable — from the rate of looping traffic to the type of action the switch should take when it detects a loop.

» With thrash limiting, the switch only detects a loop when a storm has occurred, which can potentially cause disruption to the network. To avoid this, loop detection works in conjunction with thrash limiting to send special packets, called Loop Detection frames (LDF), that the switch listens for. If a port receives an LDF packet, one can choose to disable the port, disable the link, or send an SNMP trap.

Spanning Tree Protocol (STP) Root Guard

» STP root guard designates which devices can assume the root bridge role in an STP network. This stops an undesirable device from taking over this role, where it could either compromise network performance or cause a security weakness.

Bridge Protocol Data Unit (BPDU) Protection

» BPDU protection adds extra security to STP. It protects the spanning tree configuration by preventing malicious DoS attacks caused by spoofed BPDUs. If a BPDU packet is received on a protected port, the BPDU protection feature disables the port and alerts the network manager.

Access Control Lists (ACLs)

» The x210 Series features industry-standard access control functionality through ACLs. ACLs filter network traffic to control whether packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way. An example of this would be to provide traffic flow control.

Tri-authentication

» Authentication options on the x210 Series also include alternatives to 802.1x port-based authentication, such as web authentication, to enable guest access and MAC authentication for end points that do not have an 802.1x supplicant. All three authentication methods—802.1x, MAC-based and Web-based—can be enabled simultaneously on the same port, resulting in tri-authentication.

Dynamic Host Configuration Protocol (DHCP) Snooping

» DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks this against the DHCP snooping database to ensure only clients with specific IP and/or MAC addresses can access the network. Combining DHCP snooping with other features, like dynamic ARP inspection, increases security in Layer 2 switched environments. This also provides a traceable history, which meets the growing legal requirements placed on service providers.

Strong Passwords

» Enforcing strong passwords for key networking equipment users allows network administrators to increase security, and ensure a robust and reliable infrastructure.

EPSRing™ (Ethernet Protection Switched Ring)

» EPSRing allows several x210 switches to join a protected ring capable of recovery within as little as 50ms. This feature is perfect for high availability in enterprise networks.

Link Aggregation

» Link aggregation allows a number of individual switch ports to be combined, forming a single logical connection of higher bandwidth. This provides higher performance link, and also provides redundancy for a more reliable and robust network.

Voice VLAN

» Voice VLAN automatically separates voice and data traffic into two different VLANs. This automatic separation places delay-sensitive traffic into a voice dedicated VLAN, simplifying QoS configuration.

Find Me

» In busy server rooms comprised of a large number of equipment racks, it can be quite a job finding the correct switch quickly among many similar units. The "Find Me" feature is a simple visual way to quickly identify the desired physical switch for maintenance or other purposes, by causing its LEDs to flash in a specified pattern.

Key Solutions

Network Convergence

The convergence of network services in the Enterprise has led to increasing demand for highly available networks with minimal downtime. Diagram 1 shows x210-24GT switches with high performance EPSR connectivity to the SwitchBlade® x8112 core chassis. This topology provides recovery in as little as 50ms, if required. Management of the network is simplified as all x-series switches run the advanced AlliedWare Plus operating system, with an industry-standard CLI.
Network Flexibility

Flexible network deployment is facilitated by the smaller 9- and 16-port x210 models, shown in diagram 2. Whisper quiet with a fanless design, they can be placed in work areas and on desks without disrupting staff. AMF provides an easy yet powerful solution for managing devices with plug and play simplicity.

x210 Series | Enterprise Edge Switches
Product Specifications

PRODUCT	10/100/1000T (RJ-45) COPPER PORTS	SFP AND 10/100/1000T COMBO PORTS	100/1000X SFP PORTS	TOTAL PORTS	SWITCHING FABRIC	FORWARDING RATE
AT-x210-9GT	8	-	1	9	18 Gbps	13.4 Mpps
AT-x210-16GT	14	2	-	16	32 Gbps	23.8 Mpps
AT-x210-24GT	20	4	-	24	48 Gbps	35.7 Mpps

Physical Specifications

PRODUCT	HEIGHT	WIDTH	DEPTH	MOUNTING	WEIGHT	
					UNPACKAGED	PACKAGED
AT-x210-9GT	38 mm (1.50 in)	263 mm (10.35 in)	179 mm (7.05 in)	Desktop	1.4 kg (3.09 lb)	
AT-x210-16GT	44 mm (1.73 in)	341 mm (13.42 in)	210 mm (8.27 in)	Desktop	2.0 kg (4.41 lb)	
AT-x210-24GT	44 mm (1.73 in)	440 mm (17.32 in)	210 mm (8.27 in)	Rack-mount	2.7 kg (5.95 lb)	

Performance
» Up to 8K MAC addresses
» 256 VLANs (4K VLAN IDs)
» 128MB DDR SDRAM
» 64MB flash memory
» Packet Buffer memory: 512KB
» Supports 9kB jumbo frames
» Wirespeed forwarding

Reliability
» Modular AlliedWare Plus operating system
» Full environmental monitoring of PSU internal temperature and internal voltages. SNMP traps alert network managers in case of any failure

Flexibility and Compatibility
» SFP ports will support any combination of 10/100/1000T, 100X, 100FX, 100BX, 1000X, 1000SX, 1000LX, 1000ZX or 1000ZX CWDM SFPs

Diagnostic Tools
» Find-me device locator
» Automatic link flap detection and port shutdown
» Ping polling for IPv4 and IPv6
» Port mirroring
» TraceRoute for IPv4 and IPv6

IPv6 Features
» Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
» NTPv6 client and server

Management
» Allied Telesis Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery (AMF All-Clients license required)
» Console management port on the front panel for ease of access
» Eco-friendly mode allows ports and LEDs to be disabled to save power
» Web-based Graphical User Interface (GUI)
» Industry-standard CLI with context-sensitive help
» Powerful CLI scripting engine
» Comprehensive SNMP MIB support for standards-based device management
» Built-in text editor

» Event-based triggers allow user-defined scripts to be executed upon selected system events

Quality of Service (QoS)
» 4 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
» Limit bandwidth per port or per traffic class down to 64kbps
» Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
» Policy-based QoS based on VLAN, port, MAC and general packet classifiers
» Policy-based storm protection
» Extensive remarking capabilities
» Taildrop for queue congestion control
» Strict priority, weighted round robin or mixed scheduling
» IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

Resiliency
» Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
» Dynamic link failover (host attach)
» EPSRing (Ethernet Protection Switched Rings) with enhanced recovery for extra resiliency
» Loop protection: loop detection and thrash limiting
» PVST+ compatibility mode
» RRP snooping
» STP root guard

Security
» Access Control Lists (ACLs) based on layer 3 and 4 headers
» Configurable auth-fail and guest VLANs
» Authentication, Authorisation and Accounting (AAA)
» Bootloader can be password protected for device security
» BPDU protection
» DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
» Dynamic VLAN assignment
» Network Access and Control (NAC) features manage endpoint security

» Port-based learn limits (intrusion detection)
» Private VLANs provide security and port isolation for multiple customers using the same VLAN
» Secure Copy (SCP)
» Strong password security and encryption
» Tri-authentication: MAC-based, web-based and IEEE 802.1x

Environmental Specifications
» Operating temperature range:
   x210-9GT: 0°C to 50°C (32°F to 122°F)
   x210-9GT: 0°C to 45°C (32°F to 113°F) with AT-SPLX40 or AT-SPZX80
   x210-16GT: 0°C to 40°C (32°F to 104°F)
   x210-16GT: 0°C to 35°C (32°F to 95°F) with AT-SPLX40 or AT-SPZX80 or AT-SPFX/2 or AT-SPFX/15
   x210-24GT: 0°C to 40°C (32°F to 104°F)
   Derated by 1°C per 305 meters (1,000 ft)
» Storage temperature range:
   -25°C to 70°C (-13°F to 158°F)
   Operating relative humidity range:
   5% to 90% non-condensing
» Storage relative humidity range:
   5% to 95% non-condensing
» Operating altitude:
   3,048 meters maximum (10,000 ft)

Electrical Approvals and Compliances
» EMC: EN55022 class A, FCC class A, VCCI class A
» Immunity: EN55024, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) – AC models only

Safety
» Standards: UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, EN60950-1, EN60825-1, AS/NZS 60950.1
» Certifications: UL, cUL, UL-EU

Restrictions on Hazardous Substances (RoHS) Compliance
» EU RoHS compliant
» China RoHS compliant

Country of Origin
» Singapore

Power and Noise Characteristics

PRODUCT	AVERAGE POWER CONSUMPTION	MAX POWER CONSUMPTION	AVERAGE HEAT DISSIPATION	MAX HEAT DISSIPATION	NOISE
AT-x210-9GT	8.6W	12W	28.4 BTU/hr	41.7 BTU/hr	Fan-less
AT-x210-16GT	16W	19W	55.9 BTU/hr	64.5 BTU/hr	Fan-less
AT-x210-24GT	25W	28W	85.3 BTU/hr	94.8 BTU/hr	Fan-less

Standards and Protocols

AlliedWare Plus Operating System
Version 5.4.4

Authentication
RFC 1321   MD5 Message-Digest algorithm
RFC 1828   IP authentication using keyed MD5

Encryption
FIPS 180-1   Secure Hash standard (SHA-1)
FIPS 186   Digital signature standard (RSA)
FIPS 46-3   Data Encryption Standard (DES and 3DES)

Ethernet
IEEE 802.1AX Link aggregation (static and LACP)
IEEE 802.2   Logical Link Control (LLC)
IEEE 802.3   Ethernet
IEEE 802.3ab 1000BASE-T
IEEE 802.3ad Static and dynamic link aggregation
IEEE 802.3u   100BASE-X
IEEE 802.3x   Flow control - full-duplex operation
IEEE 802.3z   1000BASE-X

IPv4 Standards
RFC 791   Internet Protocol (IP)
RFC 792   Internet Control Message Protocol (ICMP)
RFC 826   Address Resolution Protocol (ARP)
RFC 894   Standard for the transmission of IP datagrams over Ethernet networks
RFC 919   Broadcasting Internet datagrams
RFC 922   Broadcasting Internet datagrams in the presence of subnets
RFC 932   Subnetwork addressing scheme
RFC 950   Internet standard subnetting procedure
RFC 1042   Standard for the transmission of IP datagrams over IEEE 802 networks
RFC 1071   Computing the Internet checksum
RFC 1122   Internet host requirements
RFC 1191   Path MTU discovery
RFC 1256   ICMP router discovery messages
RFC 1518   An architecture for IP address allocation with CIDR
RFC 1519   Classless Inter-Domain Routing (CIDR)
RFC 1812   Requirements for IPv4 routers
RFC 1918   IP addressing

IPv6 Standards
RFC 1981   Path MTU discovery for IPv6
RFC 2460   IPv6 specification
RFC 2464   Transmission of IPv6 packets over Ethernet networks
RFC 3484   Default address selection for IPv6
RFC 3596   DNS extensions to support IPv6
RFC 4007   IPv6 scoped address architecture
RFC 4193   Unique local IPv6 unicast addresses
RFC 4291   IPv6 addressing architecture
RFC 4443   Internet Control Message Protocol (ICMPv6)
RFC 4861   Neighbor discovery for IPv6
RFC 4862   IPv6 Stateless Address Auto-Configuration (SLAAC)
RFC 5014   IPv6 socket API for source address selection
RFC 5095   Deprecation of type 0 routing headers in IPv6

Management
AMF MIB and SNMP traps
AT Enterprise MIB
SNMPv1, v2c and v3
IEEE 802.1AB Link Layer Discovery Protocol (LLDP)
RFC 1155   Structure and identification of management information for TCP/IP-based Internets
RFC 1157   Simple Network Management Protocol (SNMP)
RFC 1212   Concise MIB definitions
RFC 1213   MIB for network management of TCP/IP-based Internets: MIB-II
RFC 1215   Convention for defining traps for use with the SNMP
RFC 1227   SNMP MUX protocol and MIB
RFC 1239   Standard MIB
RFC 2011   SNMPv2 MIB for IP using SMIv2
RFC 2012   SNMPv2 MIB for TCP using SMIv2
RFC 2013   SNMPv2 MIB for UDP using SMIv2
RFC 2096   IP forwarding table MIB
RFC 2578   Structure of Management Information v2 (SMIv2)
RFC 2579   Textual conventions for SMIv2
RFC 2580   Conformance statements for SMIv2
RFC 2674   Definitions of managed objects for bridges with traffic classes, multicast filtering and VLAN extensions
RFC 2741   Agent extensibility (AgentX) protocol
RFC 2819   RMON MIB (groups 1,2,3 and 9)
RFC 2863   Interfaces group MIB
RFC 3164   Syslog protocol
RFC 3176   sFlow: a method for monitoring traffic in switched and routed networks
RFC 3411   An architecture for describing SNMP management frameworks
RFC 3412   Message processing and dispatching for the SNMP
RFC 3413   SNMP applications
RFC 3414   User-based Security Model (USM) for SNMPv3
RFC 3415   View-based Access Control Model (VACM) for SNMP
RFC 3416   Version 2 of the protocol operations for the SNMP
RFC 3417   Transport mappings for the SNMP
RFC 3418   MIB for SNMP
RFC 3635   Definitions of managed objects for the Ethernet-like interface types
RFC 3636   IEEE 802.3 MAU MIB
RFC 4188   Definitions of managed objects for bridges
RFC 4318   Definitions of managed objects for bridges with RSTP
RFC 4560   Definitions of managed objects for remote ping, traceroute and lookup operations

Multicast Support
IGMP query solicitation
IGMP snooping (IGMPv1, v2 and v3)
IGMP snooping fast-leave
MLD snooping (MLDv1 and v2)

Quality of Service (QoS)
IEEE 802.1p   Priority tagging
RFC 2211   Specification of the controlled-load network element service
RFC 2474   DiffServ precedence for four queues/port
RFC 2475   DiffServ architecture
RFC 2597   DiffServ Assured Forwarding (AF)
RFC 2697   A single-rate three-color marker
RFC 2698   A two-rate three-color marker
RFC 3246   DiffServ Expedited Forwarding (EF)

Resiliency
IEEE 802.1D   MAC bridges
IEEE 802.1s   Multiple Spanning Tree Protocol (MSTP)
IEEE 802.1w   Rapid Spanning Tree Protocol (RSTP)

Security
SSH remote login
SSLv2 and SSLv3
TACACS+ accounting and authentication
IEEE 802.1X authentication protocols (TLS, TTLS, PEAP and MD5)
IEEE 802.1X multi-supplicant authentication
IEEE 802.1X port-based network access control
RFC 2246   TLS protocol v1.0
RFC 2865   RADIUS
RFC 2866   RADIUS accounting
RFC 3546   Transport Layer Security (TLS) extensions
RFC 3748   PPP Extensible Authentication Protocol (EAP)
RFC 4251   Secure Shell (SSHv2) protocol architecture
RFC 4252   Secure Shell (SSHv2) authentication protocol
RFC 4253   Secure Shell (SSHv2) transport layer protocol
RFC 4254   Secure Shell (SSHv2) connection protocol

Services
RFC 854   Telnet protocol specification
RFC 855   Telnet option specifications
RFC 857   Telnet echo option
RFC 858   Telnet suppress go ahead option
RFC 1091   Telnet terminal-type option
RFC 1350   Trivial File Transfer Protocol (TFTP)
RFC 1985   SMTP service extension
RFC 2049   MIME
RFC 2131   DHCPv4 (server, relay and client)
RFC 2132   DHCP options and BootP vendor extensions
RFC 2554   SMTP service extension for authentication
RFC 2616   Hypertext Transfer Protocol - HTTP/1.1
RFC 2821   Simple Mail Transfer Protocol (SMTP)
RFC 2822   Internet message format
RFC 4330   Simple Network Time Protocol (SNTP) version 4
RFC 5905   Network Time Protocol (NTP) version 4

VLAN Support
IEEE 802.1Q   Virtual LAN (VLAN) bridges
IEEE 802.1v   VLAN classification by protocol and port
IEEE 802.3ac VLAN tagging

Voice over IP
LLDP-MED   ANSI/TIA-1057
Voice VLAN

Ordering Information

AT-x210-9GT-xx
L2+ switch with 8 x 10/100/1000T ports and one
SFP port

AT-RKMT-J05
Rack mount kit for x210-9GT

AT-x210-16GT-xx
L2+ switch with 14 x 10/100/1000T ports and 2
combo ports (SFP and 10/100/1000T)

AT-x210-24GT-xx
L2+ switch with 20 x 10/100/1000T ports and 4
combo ports (SFP and 10/100/1000T)

SFP Modules
