Dell SonicWALL Scrutinizer Service Bulletin for SQL injection vulnerability CVE-2012-2962 VU#404051

Dear Customer,

Affected Products

- Dell SonicWALL Scrutinizer (free version)

- Dell SonicWALL Scrutinizer with Flow Analytics Module (for pay version)

Affected Software Versions

- Version 9.5.0 and older versions (e.g. 8.6.2, 9.0.0, 9.0.1, 9.5.0)

Issue Summary

After the release of Dell SonicWALL Scrutinizer 9.5.0, we received a report of an issue whereby a Scrutinizer user who had already authenticated to the product could manipulate a certain URL to run SQL commands against the Scrutinizer database. Error output was also displayed which provided debug information detailing the query being run. While the risk to most Scrutinizer installations was low, we decided to proactively publish a patched update to fix this vulnerability in the form of Scrutinizer 9.5.2.

Resolution

We recommend existing users of Dell SonicWALL Scrutinizer 9.5.0 and earlier versions upgrade to version 9.5.2 to prevent unauthorized queries from being run via the URL by authenticated users. Version 9.5.2 is available for download from www.mysonicwall.com. Users should log onto mySonicWALL and click on Downloads > Download Center in the navigation panel on the left, then select "Scrutinizer Software" in the Software Type drop down menu.

Reported by

Devon Kearns, Admin, Offensive Security
