

AT-AR442S

Secure SHDSL Router

AT-AR442S

I × SHDSL port (2 Wire & 4 Wire)

5 x 10/100BASE-T ports

I x PIC slot

I x Asynchronous port

Secure SHDSL Routing Solution

The AT-AR442S secure SHDSL router provides business class quality and extensive software features at a highly competitive price. Designed with the needs of the branch office or small-to-medium business in mind, the AT-AR442S is a desktop, broadband router that comes with dying gasp and the WAN back-up features that businesses expect. It allows businesses to take advantage of cost effective DSL technology without compromising on bandwidth, throughput, features or security.

The superior performance of the AT-AR442S addresses the needs of small to medium sized enterprises and is unmatched in products of this class. The AT-AR442S comes with, or has as optional extras, all the software features necessary for a product of this type, such as:

- Stateful Inspection Firewall
- An extensive VPN capability
- Comprehensive SHDSL support
- An extensive Quality of Service (QoS) suite
- Multiple routing protocols
- Comprehensive configuration and management

Extensive VPN Capability

The extensive IPsec based VPN capability of the AT-AR442S allows the interconnection of branch offices, remote tele-workers, and other users who require secure access to a corporate network. This capability provides a cost effective alternative to long-distance dial-in, leased line or frame-relay connections. The AT-AR442S also comes complete with integrated hardware acceleration to maximise encryption throughput during secure communication, and is compatible with key IPsec VPN clients.

Two new GUI wizards for site-to-site and remote access VPNs (available in AlliedWare 2.9.1) makes VPN configuration a snap.

Security

In addition to hardware-based encryption, the AT-AR442S comes with other security features, such as traffic filtering with event logging. Traffic filtering uses the source and destination address, port, protocol, and TCP packet type to provide control over traffic that passes through the AT-AR442S. The Stateful Inspection Firewall provides an increased level of security and complements the filtering functions in the base product. Also included are HTTP and SMTP proxies, which provide improved control over web and mail communications.

With additional license purchases, the AT-AR442S can support up to 8000 concurrent firewall sessions. As shipped, the AT-AR442S supports up to 4000 concurrent firewall sessions.

Flexibility of Modular Routing

A Port Interface Card (PIC) port on the AT-AR442S provides businesses with a high degree of flexibility, enabling them to future proof their investment, obtain additional functionality or make use of WAN back-up options. For example, a back-up WAN card, such as an ISDN card, can be installed in the PIC port—enabling businesses to protect themselves against SHDSL downtime. The AT-AR442S PIC port is compatible with a range of PICs, including BRI/PRI ISDN, high speed E1/T1, Synchronous and VoIP.

Performance

The AT-AR442S provides the exceptional performance required by converged networks. The 300MHz CPU within the AT-AR442S ensures that all packets of converged traffic types are forwarded at wire-speed and with minimal delay on the WAN interfaces.

Key Features

- I x SHDSL port supporting both 2 wire (2.3Mbps) & 4 wire (4.6Mbps) connection
- Dying gasp
- Wetting current support
- Modular Router I PIC slot that supports a range of LAN/WAN interfaces
- Integrated encryption engine supporting DES, 3DES and AES
- 5 x 10/100 Mbps Ethernet switched LAN ports; any port can also be reconfigured as a DMZ
- Secure VPN capability with IPsec
- Automatic WAN back-up
- Business class value-add software features available
 - Stateful Inspection Firewall
 - QoS
 - IPv6
- SNMP and CLI management
- Web GUI
- RoHS compliant

Allied Telesis

Comprehensive Management and Configuration

The AT-AR442S comes with a comprehensive suite of management features and is also compatible with SNMP based management packages. An extensive command set is available via the CLI, and a browser-based GUI is also provided to simplify configuration and management of the AT-AR442S. The GUI provides access to default set-ups in key management areas and provides access to regional settings. Allied Telesis' SNMP support extends to SNMPv3, which provides the option of secure management.

Feature Summary

SHDSL

Annex A (US signalling) and Annex B (European signalling)

Downstream data rate: Up to 2.3Mbps (2 wire) / Up to 4.6 Mbps (4 wire) ¹

Upstream data rate: Up to 2.3Mbps (2 wire) / Up to 4.6 Mbps (4 wire) 1

About Allied Telesis

Allied Telesis is part of the Allied Telesis Group. Founded in 1987, the company is a global provider of secure Ethernet/IP access solutions and an industry leader in the deployment of IP Triple Play networks over copper and fiber access infrastructure. Our POTS-to-10G iMAP integrated Multiservice Access Platform and iMG intelligent Multiservice Gateways, in conjunction with advanced switching, routing and WDM-based transport solutions, enable public and private network operators and service providers of all sizes to deploy scalable, carrier-grade networks for the cost-effective delivery of packet-based voice, video and data services.

Visit us online at www.alliedtelesis.com

Service and Support

Allied Telesis provides value-added support services for its customers under its Net.Cover programs. For more information on Net.Cover support programs available in your area, contact your Allied Telesis sales representative or visit our website.
